Namespaces are known only from observed bindings (rbac.namespaces is off). 'No grants observed' cannot be told from 'namespace never observed', so absence of access is NOT attested.

User objects were read; 'logged in' means a User with an identity exists.

Login attempts are recorded since 2026-08-07T23:47:59Z (last read 2026-09-14T11:11:06Z); nothing before that was ever observed.

Scope: direct bindings only; role rules are not evaluated — this is not an effective-permissions calculation.

Summary

Bindings by tier

dangling	0
unresolved	6
built_in	157
unmanaged	4
ok	34

Definitions (the dashboard's, gsd/store.py Store._FINDING_CASE)

tier	meaning
dangling	the group was observed operator-managed and is now absent — something broke; the binding grants nobody
unresolved	the group has never been seen managed and does not exist — the binding names something that never existed
built_in	a system:* virtual group — authorises real access, no object expected

tier	meaning
unmanaged	a synced group granted by a binding no policy operator manages, with no exception annotation — governance bypassed by hand
ok	resolves normally

Dangling bindings

dangling

no dangling bindings

Unresolved bindings

Acknowledged exceptions

Bindings carrying rbac.ocp.io/unmanaged-exception

group	scope	role	binding	exception
app-ocp-rbac-demo-ns-admin	openshift-user-workload-monitoring	monitoring-rules-edit	demo-monitoring-config-rb	deliberate duplicate of the GroupConfig grant — operator ruling 2026-08-02, test scaffolding
app-ocp-rbac-demo-ns-developer	openshift-user-workload-monitoring	monitoring-rules-edit	demo-monitoring-config-rb	deliberate duplicate of the GroupConfig grant — operator ruling 2026-08-02, test scaffolding

An exception suppresses the unmanaged finding; it is listed so a reviewer can re-judge it.
