Every namespace on the cluster was read, so a requested namespace that does not exist is reported as such, and a namespace with no observed binding is reported as having no grants.

User objects were read; 'logged in' means a User with an identity exists.

Login attempts are recorded since 2026-09-21T06:15:28Z (last read 2026-10-04T13:02:31Z); nothing before that was ever observed.

Scope: direct bindings only; role rules are not evaluated — this is not an effective-permissions calculation.

State is computed from the schedule and the last sync at generation time, with a 120 s grace — the Overview's rule (gsd/state.py compute_state). Error text is withheld: it can carry the directory bind DN.
