Namespaces are known only from observed bindings (rbac.namespaces is off). 'No grants observed' cannot be told from 'namespace never observed', so absence of access is NOT attested.

User objects were read; 'logged in' means a User with an identity exists.

Login attempts are recorded since 2026-08-07T23:47:59Z (last read 2026-09-14T11:11:06Z); nothing before that was ever observed.

Scope: direct bindings only; role rules are not evaluated — this is not an effective-permissions calculation.

Rejected attempts

Rejected

none

Resolution: not_gated — a real member outside the gate group; no_record — no synced membership or history (a typo, a probe, or an unsynced branch); membership_disagrees — in the gate group per the synced Group while the directory refused (a sync lagging a removal). Empty when no gate group is known.
