Every namespace on the cluster was read, so a requested namespace that does not exist is reported as such, and a namespace with no observed binding is reported as having no grants.

User objects were read; 'logged in' means a User with an identity exists.

Login attempts are recorded since 2026-09-21T06:15:28Z (last read 2026-10-08T17:50:46Z); nothing before that was ever observed.

Scope: direct bindings only; role rules are not evaluated — this is not an effective-permissions calculation.

What this evidence attests

Coverage

question	answer
Can it attest that a namespace has NO grants?	yes
Can it say who has logged in?	yes (User objects with identities)
Can it say WHEN somebody last logged in?	yes — Login attempts are recorded since 2026-09-21T06:15:28Z; nothing before that was ever observed.
Does it evaluate effective permissions?	no — direct bindings only; role rules are not evaluated — this is not an effective-permissions calculation
How far back does membership history go?	2026-09-21T06:15:27Z

Each detailed report in the catalogue expands one row of these figures; this page is the summary and inherits every caveat of the reports it summarises.
