Every namespace on the cluster was read, so a requested namespace that does not exist is reported as such, and a namespace with no observed binding is reported as having no grants.

User objects were read; 'logged in' means a User with an identity exists.

Login attempts are recorded since 2026-09-21T06:15:28Z (last read 2026-10-03T20:06:41Z); nothing before that was ever observed.

Scope: direct bindings only; role rules are not evaluated — this is not an effective-permissions calculation.

Privileged grants

Privileged here means: a binding to cluster-admin, admin, edit — cluster-admin at any scope, the others at cluster scope. Namespaced admin/edit grants are in the access matrix and the namespace report.

Direct user grants

role	scope	user	binding
edit	(cluster-scoped)	jdoe	jdoe-edit

A direct privileged grant is the highest-severity finding this dashboard knows: tied to a person, not to a reviewed group.
