Namespaces are known only from observed bindings (rbac.namespaces is off). 'No grants observed' cannot be told from 'namespace never observed', so absence of access is NOT attested.

User objects were read; 'logged in' means a User with an identity exists.

Login attempts are recorded since 2026-08-07T23:47:59Z (last read 2026-09-14T11:11:06Z); nothing before that was ever observed.

Scope: direct bindings only; role rules are not evaluated — this is not an effective-permissions calculation.

Ordered subject, then cluster scope first, then role rank. Role rank: cluster-admin > admin > edit > other — a NAME ranking, not an evaluation of rules.
